PROFILE SUMMARY

A dedicated and detail-oriented student pursuing Artificial Intelligence and Data Science. Strong analytical skills with experience in data visualization, problem-solving, and working on real-world projects. Eager to apply my knowledge in AI-driven solutions and data analytics to gain practical experience and contribute effectively

EDUCATION

Poornima University

(2022-2026)

B. Tech (CE) with specialization in Artificial Intelligence and Data Science

CGPA – 7.95

TECHNICAL SKILLS

Programming Language - Python, SQL

Frameworks And Libraries – NumPy, Pandas, Matplotlib, Seaborn, Scikit-learn

Visualization Tools – Tableau, Power BI, MS Excel, Looker

TRAINING

GRRAS SOLUTIONS PVT.LTD.

PYTHON PROGRAMMING

- Completed an intensive training program covering Python from basics to advanced, including Data Structures and Algorithms.
- Gained hands-on experience in solving complex algorithmic problems using Python.
- Implemented efficient data structures such as lists, dictionaries, heaps, and graphs in Python.
- Developed optimized solutions using recursion and sorting algorithms.
- Collaborated in group discussions, improving communication and teamwork skills.

PROJECTS

PYTHON

1. Student Result Prediction

- Predicted student exam scores based on study hours and related features using a supervised regression approach.
- Python, Pandas, scikit-learn; applied data cleaning, visualization, and Linear Regression modeling
- Achieved $R^2 > 0.9$ on test data; provided a simple yet effective model to estimate student performance and guide study planning.

2. Medical Insurance Cost Estimator

- Developed a model to predict medical insurance costs using age, BMI, sex, smoking status, children, and region with linear regression.
- Python, Pandas, scikit-learn, and Streamlit; used EDA, one-hot encoding, and OLS regression.
- Achieved $R^2 \approx 0.79$; built an interactive app for real-time predictions and cost analysis.

TABLEAU

- **Banking Analysis Dashboard**

This project provides key insights into financial performance, stakeholder contributions, and profitability trends. It includes metrics like total premium collected, equity value created, profitability by city, and cost ratios.

POWER BI

- **Global Superstore Sales Dashboard**

Developed an interactive Power BI dashboard to analyse global sales trends, visualizing key metrics like item cost, sales by region, and customer distribution. Integrated filters for dynamic data exploration, enabling data-driven decision-making.

CERTIFICATE

- NPTEL – PRIVACY AND SECURITY IN ONLINE SOCIAL MEDIA ([CERTIFICATE](#))
- NPTEL – INTRODUCTION TO THE INTERNET OF THINGS ([CERTIFICATE](#))
- GREAT LEARNING – DATA VISUALIZATION WITH POWER BI ([CERTIFICATE](#))
